DETAILED ACTION

Allowable Subject Matter

1. Claims 11-24 allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claim 13, the cited prior art of record fails to disclose or suggest a method of reducing foreign material concentration in a reaction chamber comprising a step of introducing a species provided by a component of said etch chamber into said reaction chamber that increases the adhesion of said first layer of reaction products to said inner chamber walls wherein said etching step and said introducing step occur simultaneously to provide said species for increasing the adhesion of said first layer of reaction products while said first layer is forming on said inner chamber walls.

Regarding claim 14, the cited prior art of record fails to disclose or suggest a method of reducing foreign material concentration in a reaction chamber comprising a step of introducing a species into said reaction chamber that increases the adhesion of said first layer of reaction products to said inner chamber walls wherein said introducing step comprises the steps of: removing said work piece from said reactor chamber, providing a substrate in said reaction chamber, etching said substrate to produce said species.

Regarding claims 18, 21, the applicants have presented a persuasive argument, see pages 8-9 of the response filed on 7/7/2005 that the combination of the references of Gupta, Singh and Collins does not disclose or suggest increasing the adhesion to the inner chamber walls of reaction products that are formed from a low-k dielectric layer on a substrate. The rejection(s) of claims 18-24 under 35 U.S.C 103(a) based on the

combination of Gupta et al (US 6,020,035) and Singh (US 6,776,851) and Collins (US 6,814,814) have been withdrawn
